Welcome to the Thalainagaram Health Department

Welcome to EMS!

We're the team that shows up when people go "Ouch!"

We keep things simple, friendly, and realistic—no pressure. Just smooth field operations, strong teamwork, and good vibes.

Our goal is to make every medical response feel meaningful while still being enjoyable for both our crew and the civilians we assist.

What we should Do?

Be Respectful

Always stay calm, friendly, and professional when talking to players.

On-duty conduct:

Personnel are expected to maintain character integrity throughout their shift. Disruptive behavior, unattended duty status, unrealistic actions, or misuse of external information will not be tolerated.

Follow City Rules

EMS follows the city rules plus our own EMS guidelines.

Listen to Seniors

If a higher-rank EMS gives instructions, follow them—they're there to help you learn.

What We Should Not Do !

- Do not troll, provoke, or intentionally disrupt anyone.
- Do not argue or create conflict during active scenes.
- Maintain character integrity at all times.
- Do not use external or out-of-character information.
- Do not force actions or outcomes on other individuals.
- Do not misuse EMS authority, equipment, or privileges.
- Act in a medically realistic manner at all times.
- Carrying weapons while on duty is strictly prohibited.
- Do not use EMS status to bypass arrest, death, or custody procedures.

Duty Guidelines

Staying Ready on Duty

Clock In / Clock Out

Clock in when you start working.

Clock out when you're done or going long break.

Uniform & Gear

Wear your EMS uniform.

Use EMS vehicles only when on duty.

Driving Rules

Drive safely at all times.

Use lights and sirens only for real emergencies.

No reckless driving unless it fits the EMS.

Scene Safety

Don't enter a crime scene until police say it's safe.

Make sure you and others are safe before helping the patient.

From Rookie to Chief

Leadership - L4

- **Director of Medical Service**
 - Heads the entire medical department.
- **Dean / Assistant Dean**
 - Helps manage training, standards, and operations.
- **Chief Medical Superintendent**
 - Oversees daily hospital & EMS functioning.

Senior Doctors-L3

- **Senior Surgeon**
 - Expert surgeon for major operations.
- **Junior Surgeon**
 - Assists in surgeries and advanced treatments.

Experienced Doctors-L2

- **Senior Consultant**

- Handles major medical cases and guides juniors.

- **Junior Consultant**

- Supports diagnostics and treatment planning.

- **Senior Physician**

- Experienced general doctor.

- **Junior Physician**

- Handles basic patient care under supervision.

Junior Doctors - L1

- **Senior Resident**

- Advanced trainee managing cases.

- **Junior Resident**

- Early-stage trainee learning core duties.

- **Intern**

- New medical trainee.

Trainees-L0

Paramedic

- EMS first responder in the field.

How We Treat Our Patients

Realistic Medical Practice

- Always assess the patient before taking any action.
- Perform basic medical procedures such as CPR, bandaging, and injury stabilization when appropriate.
- Use simple medical terminology when possible—accuracy matters, but perfection is not required.

Scene Flow & Professional Conduct

- Follow the natural flow of the situation already in progress.
- Do not rush medical care or force outcomes on others.
- Allow scenes to develop logically and respectfully.

Patient Transport Procedures

- Patients with serious injuries must be transported to the hospital.
- Act out the full process: ambulance arrival, patient loading, transport, and handover at the hospital.
- Treat transport as part of the medical response, not a shortcut.

Revival Protocol

- Revivals are permitted only after visible medical effort.
- Perform appropriate steps such as CPR and treatment before attempting revival.
- Instant revives or unrealistic actions are not allowed.
- Every revival must show clear medical involvement first.

How You Rank Up

Promotions are given based on how you play and how you grow in EMS. We look at:

- **Attitude** – Maintaining a calm, respectful, and professional approach in all situations.
- **Discipline** – Following department procedures, protocols, and command structure at all times.
- **Attendance** – Showing up on time, remaining active on duty, and being available when needed.
- **Cases Seen** – Actively responding to and handling medical situations with proper care and involvement.
- **Certification** – Completing required training and holding valid department-approved qualifications.

The better you do these, the faster you move up the ranks!

When the Siren Sings!

Using Your Sirens the Right Way

- Turn on lights and sirens only for real emergencies.
- If it's not urgent, drive with just your lights or none at all.
- Slow down at intersections — even with sirens on.
Safety first!
- Turn off your sirens when you reach the scene or the hospital.
- Don't spam sirens for fun — it's loud, and people might get confused.
- Always remember: safety over speed!

**When the siren sings, it means someone
needs help — make it count!**

Meet Your Medic Tools!

Tweezers

- Pull out the “ouchy” stuff (BulletWounds).

Suture Kit

- Quick stitches for quick fixes.

Ice Pack

- Chill the swelling. Literally.

Burn Cream

- For when someone touched the hot thing.

Defibrillator

- Clear! Bring them back.

Medkit

- Your all-in-one healing buddy.

Sedative

- Calm them down before they freak out.

Stretcher

- Roll out and carry them like a pro.

“From Call to Care – EMS Quick Procedure”

1.Wait for Senior Doctor to Assign the Call

Do not respond until a senior or dispatcher gives you the case.

2.Confirm Response on Radio

“EMS-XX attending the assigned call.”

3.On Arrival

- Give radio call: “EMS-XX arrived on scene.”
- Check surroundings for safety
- If shooting is happening → wait for police.
- If safe → begin diagnosis

4. Radio the Diagnosis

Example:

“EMS-XX: Patient has GSW(GunShotWound) to leg, bleeding moderate.”

5. Transport the Patient to Hospital

Load patient safely and drive Code 1/2/3 based on condition.

6. Provide Treatment at Hospital

Treat wounds, stabilize, complete medical care.

7. Radio Completion

“EMS-XX: Treatment completed, returning to service.”

Keep Our Gear Safe!

- **Return all EMS equipment when you go off-duty — no disappearing tools!**
- **Always check that you have enough tools before heading to any scene.**
- **You're responsible for any equipment you use, so handle it with care.**
- **Don't store medical items in personal cars or ambulances — keep them in EMS storage only.**
- **Treat EMS gear like it's gold... because without it, we can't save anyone!**

Note:

Sharing is caring — but not when it comes to EMS equipment!

Ready to Get Started?

You're about to step into one of the most fun and important roles in Thalainagaram.

No stress, no pressure — just the basics to help you become a confident and friendly medic.

Take your time, enjoy the process, and get ready to help people, save lives, and bring good vibes to every scene.

Let's get started!
